Recent Achievements:

400 Site, 1500 Seat Terminal Server based Point of Sale System.

Amber Worth and Cliff Bree were the designers and implementers of the infrastructure and delivery portion of this state-of-the-art centralized point of sale and stock management system. Distributed over two enterprise scale data centres, this design enabled failover technologies, secure virtual private networking and fast disaster recovery. System availability and performance rated very highly. Large scale load balancing and high speed data communications were implemented. Email systems and office communication mechanisms were included. Fibre connected data centres, SAN (storage area network) and virtualization technologies were utilized.

50 Site, 70 Seat Terminal Server based Office and Point of Sale System.

Amber Worth and Cliff Bree implemented the infrastructure and delivery portion of this centralized point of sale and office administration system based on the experience from previous successes. Load Balanced Terminal Servers were also used in this implementation. Email systems and office communication mechanisms were included. Ambient iT take a continuing active role in strategic planning and project management for this organisation.

Small/Medium Business Systems Infrastructure.

Ambient iT have introduced business systems or enhanced business infrastructure in over a dozen locally based professional businesses in the last year. These activities have included existing systems audits, resulting recommendations, designs, proposals implementations. Some of the key aspects of these implementations include:

- Office Networks and Software
- Fileserver and systems security
- Group Policy implementations
- Backup and Recovery Implementations
- Secure Remote Access
- Email Servers and Mail Archives
- Mobile Email, Contacts & Calendars
- Anti-Spam/Anti-Virus Solutions
- Policy implementations
- Project and Strategy Management
